About this Troubleshooting Training Guide

The proupose

- The purpose of this Troubleshooting Training Guide is to provide a general guideline on the steps to performance when issues occur with samples, reagents and cards on board the Erytra analyzer. The guide provides also information to troubleshoot disabled modules (centrifuge, incubators and fluidics issues).
- This Guide is intended to be used for reference after receiving appropriate training from a Grifols Certified Technical Trainer. For more detailed information on the steps of each process included in this guide, please refer to the user manual.
- This guide does not replace the interventions required by the local Grifols service representative.
- Grifols does not take any responsibility to provide an updated version of this document, nor to ensure that it is updated with the most recent available versions of the related labeling documents referenced in it.
- Please visit the Grifols Technical Library (<https://techdocs.grifols.com>) to review the most current versions of the relevant documents for your region.
- If you have any questions, please contact your local Grifols service representative before beginning any operation.
